

Amendments to the Specification

IN THE WRITTEN DESCRIPTION

Please replace paragraphs [0054] and [0055] with the following amended paragraphs:

[0054] FIG. 2 shows a plan view of a blank for the manufacture of a collapsible container in accordance with FIG.

1, and;

[0055] FIG. 3 shows a section along line III-III of FIG.

1-, and

Please add the following new paragraph after paragraph [0055]:

[0055.1] FIG. 4 shows a plan view of a blank having a hologram and a window thereon.

Please replace paragraph [0075] with the following amended paragraph:

[0075] One of the consumer-relevant advantages in accordance with the invention is that the corresponding container is characterized by some visual particularities. For example, the container can be prepared in various shapes, such as oval, circular, approximately square or even polygonal as well as bean-shaped and the like. Due to the transparency in particular in the visible spectral region, the contents of the container is moreover also visible without having to open it. Both the filling level and the condition of the food can be checked in a simple manner. The various possibilities of the print result in further visual advantages. The print can also have such a design that there is a glossy effect which particularly emphasizes the print optically. Moreover, the print can have a three-dimensional effect. It is possible to provide the complete container with a print except for at least one window 28 as represented in FIG. 4. The print can be formed by a hologram 30 as represented in FIG. 4 which

offers further optical advantages. Moreover, the print can at least partially become visible only after the food has been taken out, which makes it possible, for example, to inform the consumer about a prize he won or the like.
